

Our range of Richmark cones are tough and robust and adapted specifically for Airfield operation. We have two main types, but others are available on request.

They are long lasting, adaptable and can be easily stored. A stable, bright, robust cone for applications as needed across the airfield for visibly marking restricted access areas.

Standard Cones

A2 Cones

Richmark A2 cone is designed for marking especially on grass airfields. Use in lines as a delineator, or for marking bad ground.

Road Studs

Edge of Carriageway or lane markers. Ideally suited to give good performance on all types of bituminous and concrete surface including both new and un-trafficked areas.
